Produce professional documents,
saving time and money

Effortlessly compile, edit and print documents using both digital and hard copy content

If you need to compile documents using information in a variety of formats – from Microsoft Word files to hard copy pages – then Canon's iW Publishing Manager Professional Edition is the perfect solution. This easy-to-use document publishing software enables you to combine scanned pages with Microsoft Office and Adobe Acrobat files to create single documents simply and efficiently – saving you time, hassle and money.

iW Publishing Manager Professional (Pro) is the enhanced version of iW Publishing Manager Standard, offering additional functionality to meet the needs of the digital 'print on demand' market.

Efficient and time saving

Compiling documents from a range of sources takes up valuable time and resources. With iW Publishing Manager Pro you can do all this on-screen through a few simple drag and drop commands, save the whole job (including all of the finishing instructions) and store it for future use. You can also integrate hard copy documents using scanning and image editing tools within iW Publishing Manager Pro which can import pages from Canon print devices via hot folder links on your screen desktop.

Professional output for a small investment

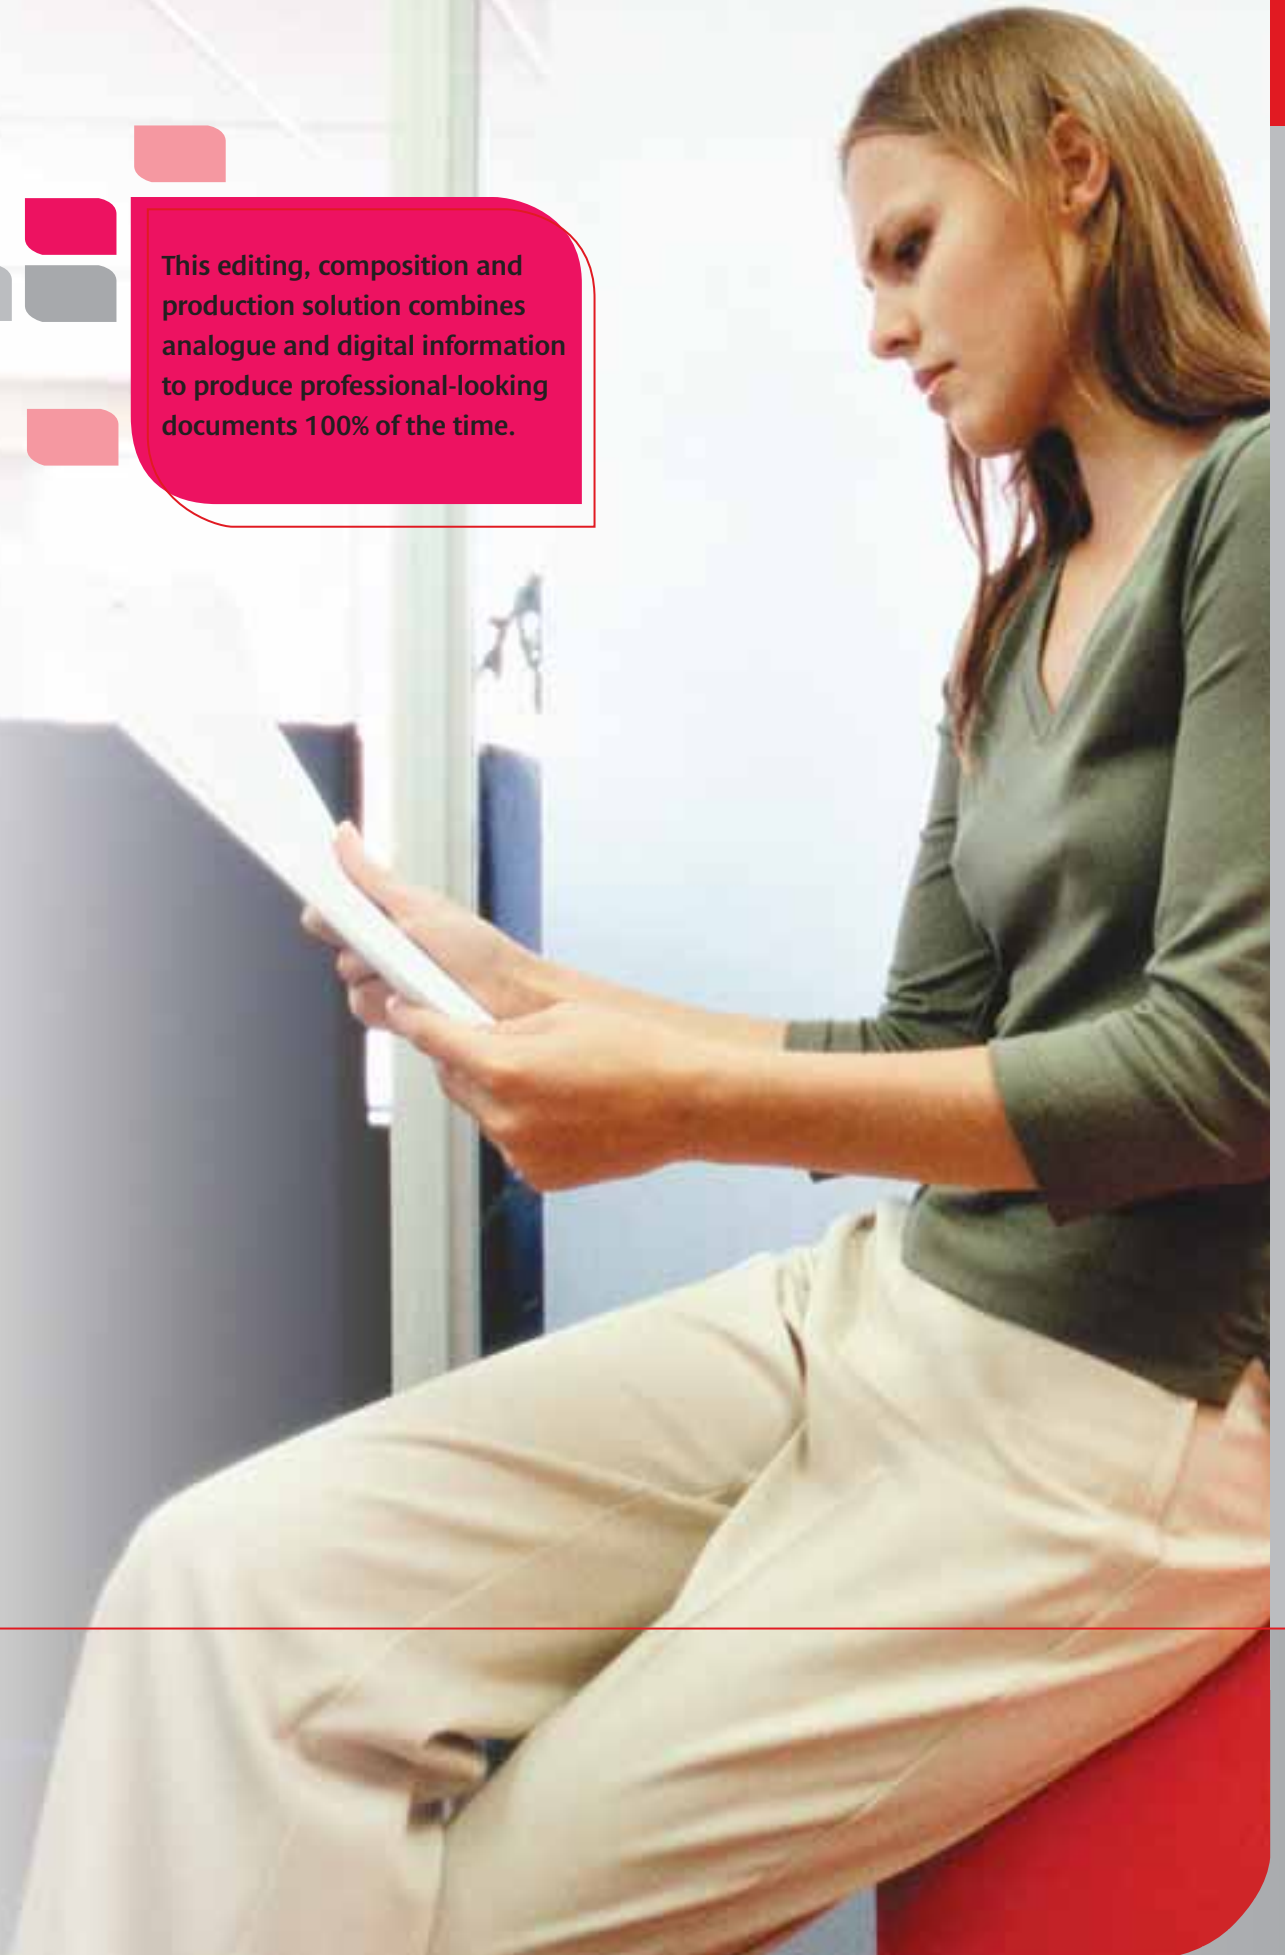

This software enables users to deliver top quality documents without significant investment in software or user training. User friendly, advanced editing and annotation tools deliver sophisticated page level editing and control, plus support for all in-line finishing functions available via Canon printer drivers.

Adapts to suit your needs

iW Publishing Manager Pro offers broad and flexible functionality. Dependent on your needs, the software can either augment your existing workflow capabilities, or provide you with a complete document preparation and printing solution when integrated with Canon print engines, scanners and finishers. To complete the workflow, iW Document Manager provides easy and quick document storage and retrieval options.

This editing, composition and production solution combines analogue and digital information to produce professional-looking documents 100% of the time.

So easy to use

Even the most demanding print jobs can be accomplished easily and on time. iW Publishing Manager Professional Edition is user-friendly document publishing software that enables you to create and produce a vast range of materials including manuals, brochures, catalogues, proposals, books and reports.

Simple user interface

Use the intuitive Graphic User Interface to drag and drop files into one iW Publishing Manager document. You can adjust the order of the pages and add page headers, footers and annotations of your own. You can also define the settings of individual pages, selected chapters or the whole document. You can use pre-defined templates to simplify and speed up the document lay-out process.

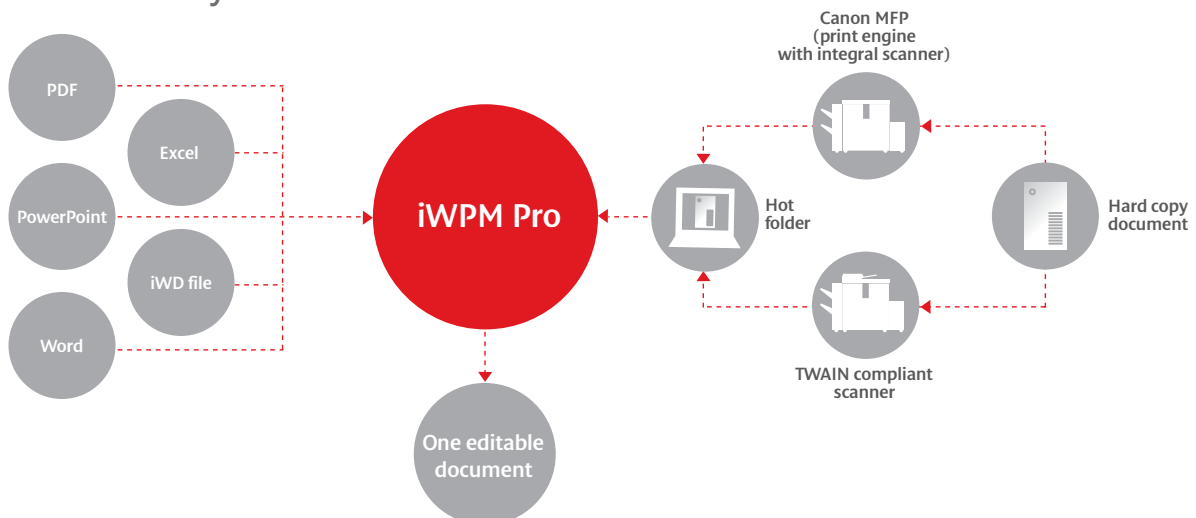

Effortless integration of hard copy documents

Importing hard copy documents is easy, as iW Publishing Manager Pro integrates with scanning functions on Canon's black and white and colour print devices. Scans are automatically transferred to desktop hot folders, within which you can modify scan settings to ensure top image quality. Embedded functionality within iW Publishing Manager Pro's Image Editor application, such as masking, de-skewing and de-speckling, makes it possible to quickly and accurately edit, correct and optimise images.

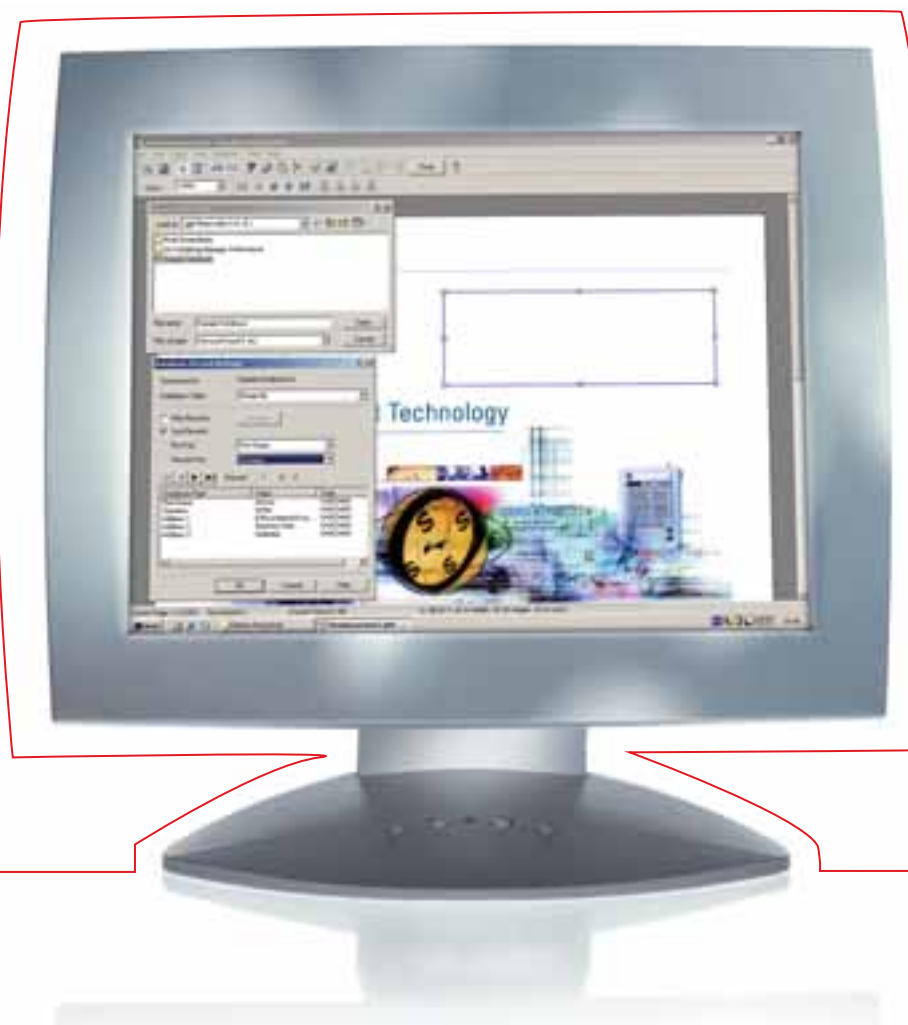

Easily import digital files

You can import Microsoft Office, Adobe Acrobat and Canon's own iWD native files – by simply dragging and dropping them into iW Publishing Manager Pro. You'll compile better documents faster and with less wastage, without even having to leave your desk.

iWPM Pro Key Feature

iW Publishing Manager Pro means you can replace labour-intensive manual tasks with a few simple mouse clicks.

iW Publishing Manager Pro features a Variable Printing Editor that allows the user to set up variable fields - either text or graphics - on any page of a document.

Adding value through customisation

iW Publishing Manager Professional Edition features a Variable Printing Editor that allows the user to set up variable fields - either text or graphics - on any page of a document. The variable fields can be linked continuously to a database or spreadsheet, allowing customised data

to be updated before being printed on any specified number of pages. iW Publishing Manager Pro supports the industry's most popular database formats, making it easy to enhance corporate branding and customer relationship initiatives through customised direct marketing.

Produce professional quality documents time after time

A range of flexible finishing options means you can output high quality documents quickly and cost-effectively. What's more, documents saved for re-printing retain finishing settings, ensuring consistent output whoever they are printed by.

Complex document creation and output made simple

You can add value to documents without compromising productivity by creating tab dividers, cover pages and chapter dividers. You can also print multiple copies of the same page on the same side of the paper, which can later be cut or trimmed off-line, reducing total print costs and lead times. The ability to preview print jobs with finishing settings clearly shown in an 'output paper view' allows for quick visual proofing to reduce the risk of costly errors.

Supports finishing functions

iW Publishing Manager Pro supports all in-line finishing functions available via Canon printer drivers – such as automatic collation, hole punching, booklet creation, folding, stapling, insertion and page numbering. Built-in intelligence means you only see the finishing functions available on the selected multi-functional printer. You can also specify different finishing options for individual chapters.

Export into user-friendly formats

You can save, store and send compiled documents in a variety of formats including TIFF, BMP, JPEG and Adobe Acrobat PDF. All print settings can be saved with the document and stored in an iW Document Manager database so that future reprints can be executed on-demand, from virtually anywhere, at anytime. Additionally, the support of industry standard file formats like PDF and TIFF enable easy integration with other digital and non-digital workflows.
